

## SCREEN MAINTENANCE SIMPLIFIED SEMINAR

### Educating the Industry

Most screening inefficiencies are caused by common problems that can be easily fixed. These common problems lead to reduced production rates, lost operating time and poor product quality all of which dictate your cost and profit per ton.

To combat these problems, Nepean Rubber & Plastics present Screen Maintenance Seminars that teach your plant managers, operators and maintenance crews how to more efficiently run and maintain your screening operation.

At last count, more than 1,200 producer personnel, representing more than 170 aggregate operations internationally, have experienced these Seminars. We consistently monitor and survey attendees to get their opinions of how well they work.

#### The numbers speak volumes:

- ✓ More than 75% clearly identified their screening problems and determined how to solve them
- ✓ More than 65% solved at least 1-2 immediate screening problems
- ✓ More than 70% increased operating time
- ✓ More than 45% improved end-product quality, increased production rates and boosted profit per ton
